DNG SOLUTIONS

VFP APPLICATION HOSTING SPECIALISTS

WHO WE ARE

We are a provider of Managed and Dedicated Hosting Services located in southern California. Created in 1996, DNG SOLUTIONS has been providing the highest quality managed hosting services since the early days of the world wide web. We strive to provide the best possible products and services for our customers, from server access to the internet to developing Web based solutions for their business.

Our commitment to excellence is evident in our array of hosting products, competitive prices, maximum uptime, reliability, cutting-edge technology, and our high standard of customer service. Through our portfolio of standardized hosting plans, e-commerce, application hosting services and Mentoring/Training, we help companies leverage the power of the Internet to grow their business.

DNG SOLUTIONS is customer-focused and dedicated to building long-term relationships with our clients. Our determination to go that extra mile in our customer service has played a large role in our continuous growth.

THE VFP ISP

We offer a higher level of VFP specific support than other ISP's. Being VFP Developers ourselves, we understand what issues can arise in the deployment of VFP applications. We can offer specific solutions for VFP servers and applications to get your site up faster and more economically.

- VFP web specific Technical Support
- Shared server com hosting

FACILITY

- Physical Security
- Fire Protection and Alarming
- Environmentally Controlled Space
- Conditioned Electrical Power
- Monitoring Availability of Servers and Communications
- Communications Circuit Provisioning and Support

DNG Solutions Co-Hosting facility utilizes guards and card key protection, as well as recording cameras and motion detectors.

Most office environments are protected by area water sprinkler systems which will activate by floor or suite. Water will damage servers and other electronic gear. DNG Solutions Co-Hosting facility is protected by pre-action (dry) selective fire suppression systems. VESDA early detection systems are deployed to discover potential combustion activity before it becomes a problem.

Separate air-conditioning system for continuous temperature and humidity control. For 100 square feet space one unit, no redundancy is assumed. DNG Solution's co-hosting facility is fully redundant with 200 computer grade high capacity systems and multiple cooling towers.

Primary Service - feed from the building electrical panel to 100 amp service at 208 volts assumed for 100 square feet space and 200 amp service at 208 volts for 200 square foot space. This will support both the dedicated air conditioning and the computer equipment.

Uninterruptable Power Supply (UPS) - provides 15 minutes to 1 hour of electric power to computer equipment in the event of a power outage or brown-out. Also conditions electric power to filter any irregularities. Switches to back-up generator within the first minute.

Back-Up Generator - provides for electrical supply in the event of prolonged electrical outages or brown-outs. Expensive and difficult, if not impossible, to implement in typical office buildings.

DNG Solutions co-hosting facility provides all of the above referenced capabilities at the highest standards available in the industry. Parallel redundant electrical service, multiple redundant UPS's and multiple 2 mega watt back-up generators.

Monitoring Availability of Data Processing Equipment (Servers) and Communications Connectivity: DNG Solutions provides 24 hour per day, seven day per week communications connectivity monitoring to all co-hosting customers as a standard service. Server monitoring is available at an additional cost.

DNG Solutions co-hosting facility exceeds the quality, flexibility and utility of in-house server facilities. By Choosing to host with us, you save maintenance costs, operation expenses, unexpected growth requirements and management overhead. Our products and services allow for incremental growth, quick expansion, operations services, and superior communication capability.

The core network is a Cisco Powered Network which incorporates a Highly Available Design. Dual Redundant Cisco Gigabit Switch Routers (GSR) and catalyst 6509 Switches provide multiple gigabit capacity to customer co-location environments. DNG Solutions has standardized on dual Fast Ethernet (FE) or Gigabit Ethernet (GE) connectivity, to each customer providing 99.9999% uptime.

“We OUTFOX the Competition!”

TESTIMONIALS

"DNG Solutions offers great service to Visual Foxpro developers who use West Wind Web Connection. I'm glad to see that this service addresses both high end solutions as well as recognizing the needs of smaller developers/projects."

*-- Rick Strahl, West Wind Technologies
- Creator of Web Connection*

"What has impressed me about working with DNG is the help that was provided, and they dealt with a newbie in an understanding fashion. The bottom line is; DNG treated me as a valued customer, not as someone they had to be bothered with. The comment I got from the client was, - Boy, that's fast! Thanks again."

-- Ethan Allen Chase, The Best Web Publishing

"DNG Solutions provided expert hands-on assistance we needed to get our Web Connect application up and running smoothly. They're not ISP box-pushers, they're Web Connect experts. "

-- Todd Landrum, Paladin Programming

FOUNDER

Darrell Gardner received his Bachelors degree in Computer Science from the University of Georgia in 1986. Prior to working at DNG full-time, Darrell was the Director of IT at two Southern California companies, one in the distribution industry and the other in the high tech consulting arena (including data centers).

Darrell was voted Web Connection MVP this year, and was a nominee the last two previous years. If you can't find Darrell active on the support boards at West Wind Technologies, you can contact him via e-mail at darrellg@dngsolutions.net or visit our website at: www.dngsolutions.net.

- West Wind MVP 2002
- Two-Time West Wind MVP nominee
- Speaker at West Wind Users Conference
- Speaker at PWR Board of Realtors
